DriPAD Super Absorbent Pads

... featuring a broad spectrum antimicrobial agent
to control bacteria and odors

DriPADs are a new absorbent pad uniquely designed to manage the potentially biohazardous fluids encountered by EMS personnel.

When unknown biofluids are encountered in the field, Reach for the Purple Pad ... the DriPAD from Quellent!

These super absorbent pads can absorb and trap many liters of blood and biofluids and have an EPA registered antimicrobial agent that controls bacteria and odors.

Here's how they can help you do your job more easily and safely:

- *Absorb blood and urine.*
- *Manage fluids during field births.*
- *Clean-up spills on site and in vehicle.*
- *Protect equipment, gurney or cab seat.*
- *Reduce clean-up down time.*
- *Enhance protection of EMS personnel.*

DriPAD Advantages:

- Super absorbent
- Non-woven
- Disposable
- Low Skid Backing
- Gels and Traps Biofluids
- Available in five sizes:
 - 9" x 9" EM-0909-BP-825
 - 23" x 20" EM-2320-BP-412
 - 23" x 32" EM-2332-BP-412
 - 16" x 60" EM-1660-BP-412
 - 23" x 60" EM-2360-BP-412

DriPADs contain an antimicrobial agent to control bacteria and odors within the pad.

DriPADs also save money and add to a cleaner health care environment:

Efficient - absorbing fluids at their source, before they drip on equipment or run along the floor, saves clean-up time.

Cost Effective - It takes many of the cheaper pads to absorb the same as one DriPAD. DriPADs are the most cost effective absorbent liter for liter.

Cleaner Environment - DriPADs trap the nosocomial pathogens in the fluids that they absorb, and won't drip when folded up and carried away for disposal - that's cleaner.

Better Infection Control - DriPADs are also barrier pads - the purple low skid backing is a barrier between the biofluids encountered and the personnel in the field. Use them barrier side up as knee pads, or as a drop cloth.

Reduced Spill Hazards - When DriPADs are handy, spills get absorbed quickly - lessening the risk that a worker may slip and fall.
